

160+ Workplace Technology Projects Completed Across North America Over the Past 10 Years, With No Sign of Slowing Down

Client

Burns & McDonnell is a full-service engineering, architecture, construction, environmental, and consulting solutions firm with offices located worldwide. For the past ten years, they've trusted ASD® to update and build-out their low voltage workplace technology systems across North America.

Challenge

Burns & McDonnell has offices across the globe and they are constantly expanding. Their work requires them to have the latest technology in a secure environment, and they generally have a compressed schedule to make it all happen. They turned to ASD® to help them get their offices built-out on time and in budget.

IMPORTANT CONSIDERATIONS

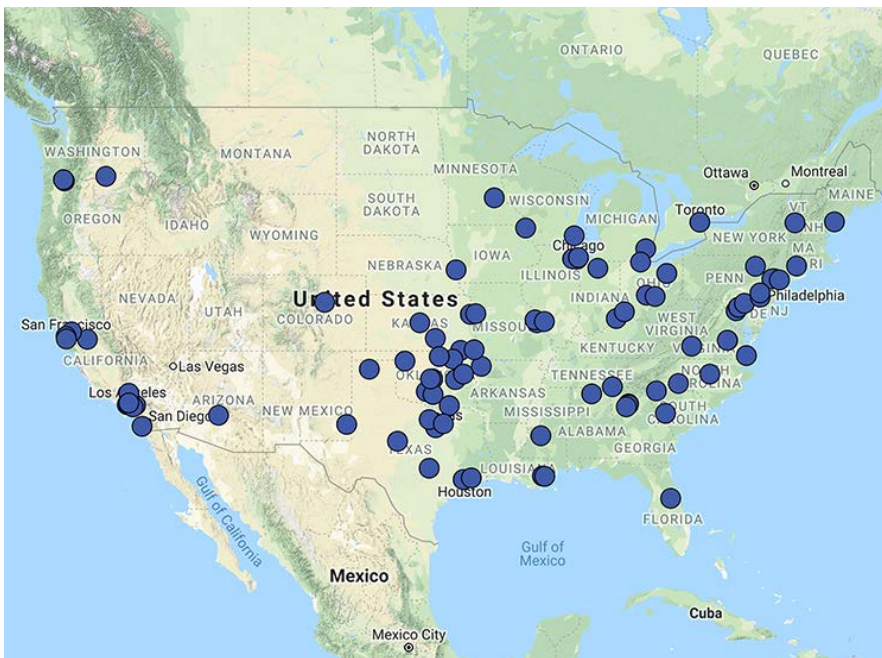

- What can be done to improve turn around time?
- In an open office environment, how can employees keep sensitive information private?

Solution

Burns & McDonnell has offices from Vancouver to Honolulu, so finding technicians may seem challenging. Luckily, ASD® project managers have their AASDI network, a detailed cloud labor database, so they can find the right techs for the job regardless of the location. Having easy access to vetted and qualified talent across North America makes finding and dispatching techs a quick and easy process. This, along with the AASDI mobile app, means project turnaround time is better than ever.

Employees at Burns & McDonnell work with a variety of clients, often dealing with sensitive information. To provide additional privacy and minimize the unnecessary spread of information, sound masking systems have been implemented in several of their offices. These sound masking systems help keep noise levels down and reduce distractions in their open office environments.

Result

For the past ten years, ASD has been implementing Burns & McDonnell's workplace technology. During this time they have had 2 Project Managers serve as their primary points of contact; this simplifies communications tremendously and makes it easier on them. Every time Burns & McDonnell starts a project with ASD, they know what to expect. From who they're working with to the high-quality deliverables, ASD's work is consistent and reliable.
